Scalable and Cost-Effective Azure Platform Empowers Complex Document Data Extraction

“After serious investigation, it became apparent that the finest cloud platform for Axis to build our solution upon while still reducing costs, increasing scalability, and enabling us to get to market faster was Microsoft Azure.” – Greg Lovett, CEO, Axis Technical Group

• SITUATION

Advances in natural language processing allow software to interpret the content within documents, empowering the technology to extract key data for businesses. The processing needed for these capabilities can be demanding, traditionally requiring elaborate and expensive software and hardware environments.

• SOLUTION

Axis AI chose to deploy its document data extraction solution on the Microsoft Azure cloud platform, which helps reduce the pressure on IT departments to build and maintain complex systems while reducing operational costs. With Azure handling the infrastructure, Axis AI can easily launch new instances of its solution in minutes instead of days. Components such as Azure Key Vault and Azure Storage are now enabled based on volume requirements, and, with the fixed cost tracking and licensing flexibility, Azure offers more accurate expenditure analysis for Axis AI clients.

• BENEFITS

Azure enables quick deployment of the Axis AI document processing solution with low risk and fast turnaround.

The scalability of Azure equates to a significant economic advantage while reducing the costs and administration.
